## DIABETIC FEET

ADVANCED SKIN  
CARE SYSTEM  
FOR DIABETES  
PATIENTS

## Diabetic feet definition

Diabetes can lead to damages in the nervous system.

A person suffering from diabetes loses proper feeling in his/ her feet. The body ceases to manufacture natural oil secretion for the protection of the skin.

Much damage is thus caused.

Those two major changes in the skin may cause abnormal pressure on the skin, bones and joints of the foot while walking or running (actions that diabetic patients are required to do lots of) and can breakdown the skin of the foot and eventually sores may develop. Since blood circulation is damaged as well, the skin does not receive the proper nourishment and all necessary ingredients it needs. The skin therefore, cannot properly rejuvenate itself and naturally heal any damage that may occur.

## Preventive treatment

### You can avoid it!

You can provide the skin with all the necessary ingredients it needs in order to moisturize, lubricate, nourish, rejuvenate and protect itself against dehydration, loss of elasticity, dryness and eventually breaking down. Those ingredients can treat the skin in case it does breakdown and help it enhance its natural ability to rejuvenate/ heal itself.

## CleaDerma DermoSilk Foot Cream

This cream is an all **Natural Active Ingredients** product, utilizing natural oils and plant extracts enriched with Dead Sea minerals creating a unique nourishing/moisturizing system to soothe rough, dehydrated, malnourished, cracked and flaky skin.

**DermoSilk** rejuvenates skin cells whilst restoring elasticity and providing the skin with a silky, healthy, normal look and feel.

## Skin Lubrication

The CleaDerma DermoSilk is a unique formula of water in oil base, meaning that its rich texture consists of natural oils, waxes and glycerin that lubricate the skin, compensating for the loss of skin's natural ability to secrete oils for lubrication to prevent skin abrasion during walking or running.

## Skin Nourishment

Nourishing ingredients are abundant in the DermoSilk foot cream formula and includes vitamins A, B, C, D & E. It includes minerals like magnesium, calcium, bromine, zinc and others found in natural oils, Dead Sea minerals and Aloe Vera.

## Skin Rejuvenation

DermoSilk foot cream is rich with magnesium found in Dead Sea minerals, peptides and amino acids found in natural oils and minerals found in Aloe Vera extracts. All of these are used by the skin cells to rejuvenate and renew the skin. Natural oils and plant extracts boost collagen production thus enhancing the skin's natural ability to heal itself.

## Sore Treatment

Treating broken skin in early stages with CleaDerma DermoSilk is a very important preventive measure against the formation of a sore, but once a sore has developed, it is very important to treat it immediately preventing it from further expanding and help the skin defend against inflammation and infections.

The CleaDerma DCB is exactly what the foot skin needs to enhance the skin's natural ability to heal itself.

## CleaDerma DCB

CleaDerma DCB is an all **Natural Active Ingredients** product with a unique combination of natural oils and plant extracts enriched with Dead Sea minerals to create a front edge nourishing/moisturizing **mega booster** for suiting extremely dehydrated malnourished skin. This cream actively promotes the rejuvenation of skin cells whilst restoring elasticity and providing the skin with the needed building blocks for maintaining its healthy and normal condition.

The CleaDerma DCB is exactly what the foot skin needs in order to naturally heal the sore/s. Treatment should start in the early stage when the sore hasn't yet formed and the skin is red and inflamed.

CleaDerma DCB is a 100% natural active ingredients product fortified with Dead Sea minerals which helps and promotes skin's natural processes, utilizing the skin's healing characteristics found in calendula oil, comfrey extract and propolis alongside the anti inflammation capabilities of the origanum and salvia extracts.

The CleaDerma DCB is rich in avocado oil - boosting collagen production in the skin's cells. Avocado oil naturally repairs, rejuvenates and renews skin cells to naturally heal the sore.

For a diabetic patient, the CleaDerma skin care system is the right and best natural **non medicinal** method and process to prevent skin breaking and for healing sores naturally.
